
Installation Instructions

The OMRON time switch can control up to two Horizon ice machines by interrupting only the shuttle sensor signal wiring. The time switch plugs into a 115 VAC outlet, but will also operate at 220 VAC 50/60 Hz.

1. Program the OMRON H5S Weekly 2 Channel Digital Time Switch using the OMRON manual shipped with the product. See "Time Adjustment" and "Basic Operations" in the *Ordinary Timer Operation* section. Programming instructions can also be found at www.omron.com.
2. Determine the model number of the Horizon ice machine that will be connected to the timer.
3. Follow the appropriate wiring schematic for your specific ice machine.
4. Note: Each of these wiring schematics puts the timer in series with the shuttle switch so that either the timer or shuttle switch will shut the machine off.
