Safe, Economical Air Phase Cryogenic Storage Without Liquid Nitrogen

8.2 cu. ft. | 231 L

The PHCbi brand -150°C cryogenic freezer offers air phase cryogenic storage without the need for liquid nitrogen as the primary cooling medium. The hybrid auto-cascade refrigeration system delivers superior uniformity at cryogenic temperatures without stratification.

#### **Reliable Sample Security**

Powered by a robust auto-cascade refrigeration system, this chest freezer delivers superior cooling and temperature performance, leading to faster pull-down speeds and unsurpassed temperature uniformity throughout the freezer chamber. Performance and reliability are not dependent on LN<sub>2</sub>.

#### High Capacity Storage, Minimal Footprint

The use of patented VIP Plus cabinet insulation technology dramatically reduces cabinet wall thickness, allowing for higher capacity storage in a smaller footprint. This efficient layout enables storage of up to (165) 2" boxes or (105) 3" boxes, requiring only 13.07 sq.ft (1.15 m<sup>2</sup>) of lab space.

#### Safe, Economic Alternative

This innovative PHCbi brand -150°C cryogenic freezer eliminates hazardous operating conditions and frequent maintenance and cost requirements associated with  $LN_2$  storage, and minimizes the possibility of cross-contamination among multiple samples in cryogenic storage.

#### **Energy Efficiency**

Energy efficiency in our cryogenic freezers is achieved through balanced temperature performance and power management, making them an economical choice when replacing existing liquid nitrogen freezers or installing new long-term product storage systems.

### Precise Temperature Control

The integrated microprocessor-based controller and LCD graphic display enable intuitive management and monitoring of critical set points using a precise platinum RTD sensor, including touch keypads for setting freezer functions. Audible and visual alarms alert the user of out of range conditions.

#### Extra Protection, Easy Access

An  $LN_2$  back-up system, included standard, adds an extra layer of protection. (Requires connection to external  $LN_2$  supply.) An insulated locking lid with sub-lids minimizes cold air loss during routine access. Composite freezer wall insulation improves tolerance for high ambient temperature.

#### **Temperature**

The graphs below show temperatures at different locations within the chamber. This data demonstrates that 100% of the storage maintains uniform storage temperatures safely below -130°C, while temperature in LN<sub>2</sub> vapor system is dependent on storage location.
